

ROUDYBUSH™

RICE DIET

Roudybush™ Inc. introduces a new maintenance diet formulated from rice products, minerals, and vitamins. Birds showing signs of allergies to other food products, such as feather picking/self mutilation, may benefit from this diet.

Roudybush™ is proud to take avian nutrition to a new level with the introduction of our new Rice Diet.

Roudybush™ Rice Diet can be a powerful and easy tool to determine whether common destructive behaviors such as self mutilation or feather picking may be caused by a food allergy. Current allergy testing techniques can be unreliable and is one of the reasons diagnosing and treating these disorders are difficult. Rice Diet was developed to help both veterinary professionals and bird owners keep healthy, happy birds. Be the first business in your area to make this diet available to your customers.

Rice Diet is available in Mini and Small size pellets for birds from budgies to macaws. Although the Rice Diet is a Careline product, it does not require a veterinarian's prescription and can be sold over-the-counter in your store.

With all serious health problems, we recommend that owners consult a qualified veterinarian to rule out other causes of self-destructive behavior before changing their birds' diet. Please contact our staff for more information or to place an order.
